

# Ideation Phase

## Define the Problem Statements

|               |                                                |
|---------------|------------------------------------------------|
| Date          | 2 October 2026                                 |
| Team ID       | SWUID2026297489                                |
| Project Name  | Auto Ticket Classification using Flow Designer |
| Maximum Marks | 2 Marks                                        |

### Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The statement focuses on the customer, what they are trying to achieve, the barriers they face, the reason for those barriers, and how the problem makes them feel.

|                     |                                                  |                                                            |
|---------------------|--------------------------------------------------|------------------------------------------------------------|
| I am                | Describe the customer and their attributes       | IT helpdesk staff / students and teachers                  |
| I'm trying to       | List the thing they are trying to achieve        | Handle and classify incident tickets quickly and correctly |
| but                 | Describe the problems or barriers                | Tickets are manually reviewed and categorized one by one   |
| because             | Describe why the problems or barriers exist      | There is no automatic keyword-based classification process |
| which makes me feel | Describe the emotions resulting from the problem | Frustrated, delayed, and less efficient                    |

### Project Problem Statement:

**Problem:** The school IT helpdesk receives multiple incident requests daily from students and teachers, such as Wi-Fi issues, projector failures, password problems, and slow computers. Currently, IT staff manually reviews each request and assigns a category, which is time-consuming and inefficient.

**Proposed approach:** This project automates ticket classification using ServiceNow Flow Designer by analyzing keywords in the incident's Short Description and Description fields and assigning an appropriate category.

### Problem Statement Table

| Problem Statement (PS) | I am (Customer)       | I'm trying to                                      | But                                                  | Because                                                       | Which makes me feel       |
|------------------------|-----------------------|----------------------------------------------------|------------------------------------------------------|---------------------------------------------------------------|---------------------------|
| PS-1                   | IT helpdesk staff     | Classify incident tickets quickly and accurately   | Manual review and category assignment takes time     | Each ticket must be checked individually                      | Frustrated and overloaded |
| PS-2                   | Students and teachers | Get their IT issues routed to the correct category | Incorrect or delayed classification can slow support | There is no automatic classification based on ticket keywords | Delayed and dissatisfied  |

**Technology used:** ServiceNow • Flow Designer • Incident Management • Keyword-based classification
