

Project Design Phase-II

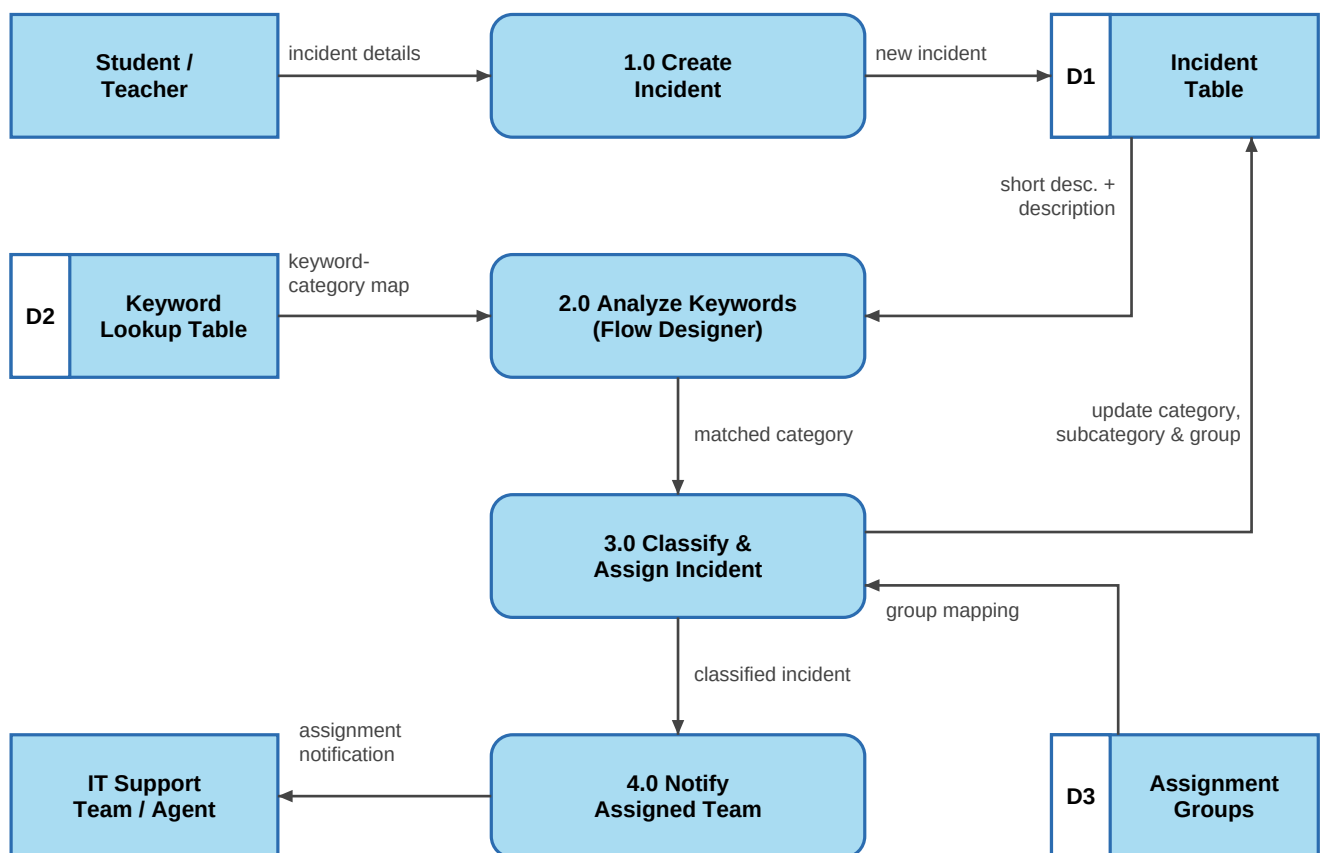

Data Flow Diagram & User Stories

Date	2 October 2026
Team ID	SWUID2026297489
Project Name	Auto Ticket Classification using Flow Designer (Incident)
Maximum Marks	4 Marks

Data Flow Diagram:

A Data Flow Diagram (DFD) is a visual representation of the information flows within a system. It shows how data enters and leaves the system, what changes the information, and where data is stored. The DFD below shows how an incident raised by a student or teacher is automatically classified and routed by ServiceNow Flow Designer.

DFD: Auto Ticket Classification using Flow Designer

Flow Description:

1. A student or teacher submits an incident with a short description and description (e.g. Wi-Fi issue, projector failure, password problem, slow computer), which is saved in the Incident table.
2. The Flow Designer trigger fires on record creation and reads the short description and description fields.
3. The flow compares the text against the keyword lookup table to find the matching category and subcategory.
4. The incident is updated with the category, subcategory and the assignment group found in the Assignment Groups table.
5. The assigned IT support team or agent is notified and picks up the already classified ticket.

User Stories

List of user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Student / Teacher (Customer)	Incident Submission	USN-1	As a student or teacher, I can submit an incident with a short description and description so that IT can resolve my issue.	Incident is created with a unique number and appears in the Incident table.	High	Sprint-1
IT Agent	Auto Classification	USN-2	As an IT agent, I want incidents classified automatically at creation by analyzing keywords in the short description and description, so I don't categorize them manually.	Category and subcategory are filled in without manual action.	High	Sprint-1
		USN-3	As an IT agent, I want each classified incident assigned to the correct support group so that tickets are routed efficiently.	Assignment group is set based on the category; ticket appears in that group's queue.	High	Sprint-1
		USN-4	As an IT agent, I want incidents with no keyword match sent to the Service Desk so that no ticket is left unclassified.	Unmatched incidents get a default group and are flagged for manual review.	Medium	Sprint-2
Student / Teacher (Customer)	Notification	USN-5	As a student or teacher, I receive a confirmation once my incident is logged and classified.	I receive a notification with the incident number and category.	Medium	Sprint-2
Administrator	Keyword Maintenance	USN-6	As an administrator, I can add or edit keywords and category mappings in a lookup table without writing code.	Updated keywords apply to newly created incidents.	Medium	Sprint-2
