

Project Development Phase

Model Performance Test

Date	10 February 2025
Team ID	SWUID2026297489
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Ticket data is stored in the custom table Incident WorkFlow (u_incident_workflow) and shown on the ticket form: Number, Caller, Category, Subcategory, Short description, Description, State, Assigned group and Assigned to. Auto-classified records INC00511 and INC00512 are shown below.   INC00511: Network / Wi-Fi INC00512: Hardware / Projector
2.	Data Preprocessing	Not applicable in the Power BI sense (no cleaning or transformation of imported data was needed). Data is standardized at entry instead: auto-number (INC + 5 digits), choice lists for Category, Subcategory and State, dependent choices between Category and Subcategory, reference fields to users and groups, and the flow fills Category and Subcategory automatically from the Short description.   Dependent values mapping Subcategory to Category Network category shows only Wi-Fi
3.	Utilization of Data Filters	Flow trigger filter: Record Created where Category is empty. Keyword filters (Short description contains): Wi-Fi or Network, Projector, Forgot password, Slow computer. List filter: Emails list filtered by Subject to find the confirmation email.   Trigger condition: Category is empty Emails list filtered by Subject
4.	DAX Queries Used	Not applicable. No DAX is used because the project is built in ServiceNow. The logic is no-code Flow Designer conditions (Short description <i>contains</i> keyword) with Update Record actions.
5.	Dashboard design	No of Visualizations / Graphs - 0 No dashboard was built. The project output is the auto-classified ticket and the confirmation email.
6.	Report Design	No of Visualizations / Graphs - 0 No report was built. The Emails log is used to verify notifications.
