

Project Development Phase Model Performance Test

Date	10 February 2025
Team ID	SWUID2026297489
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	Rule-based automation built with ServiceNow Flow Designer (no machine-learning model is used). Trigger: Record Created on Incident WorkFlow, when Category is empty. Logic (Short description contains): Wi-Fi or Network: Network / Wi-Fi Projector: Hardware / Projector Forgot password: Access / Forgot Password Slow computer: Performance / Slow Computer Action: Send Email to the caller confirming the ticket.	 Flow trigger: Record Created, Category is empty Classification step: Update Record (Category / Subcategory)
2.	Accuracy	Training Accuracy - Not applicable (rule-based flow, nothing is trained). Validation Accuracy - 100% (2 of 2 test scenarios classified correctly). Test 1: "My college Has issue with Network" gave Network / Wi-Fi. Test 2: "Projector not turning on" gave Hardware / Projector.	 Test 1: INC00511 filled as Network / Wi-Fi Test 2: INC00512 filled as Hardware / Projector
3.	Fine Tunning Result (if Done)	Not done. There is no ML model to fine-tune. Validation Accuracy - Not applicable. Possible improvement: add more keywords (for example WiFi, Login, Hanging) and a default branch for unmatched tickets.	Not applicable
