

Project Design Phase-II

Technology Stack – Auto Ticket Classification using Flow Designer

Date	02 October 2026
Team ID	SWUID2026297489
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Table 1 – Technical Architecture

S.No	Component	Description	Technology
1	User Interface	Interface for students/teachers to create and view IT incident tickets.	ServiceNow UI / Service Portal
2	Application Logic-1	Receives the incident and starts the automated ticket classification process.	ServiceNow Flow Designer
3	Application Logic-2	Checks ticket details such as category, description and priority using conditions.	Flow Designer – Conditions & Decision Logic
4	Application Logic-3	Automatically assigns the ticket to the appropriate IT support group and updates the incident.	Flow Designer – Actions & Assignment
5	Database	Stores incident description, category, priority, status and assignment information.	ServiceNow Incident Table / Platform Database
6	Cloud Database	Provides cloud-based storage and access to application data.	ServiceNow Cloud Platform
7	File Storage	Stores attachments uploaded with incident tickets, when required.	ServiceNow Attachment Storage
8	External API-1	External API is not required for the basic ticket classification workflow.	Not Applicable
9	External API-2	No second-party API is required for the proposed solution.	Not Applicable
10	Machine Learning Model	Basic version uses predefined Flow Designer conditions instead of an ML model.	Not Applicable / Rule-based Classification
11	Infrastructure (Server / Cloud)	Application is deployed and executed on the ServiceNow cloud platform.	ServiceNow Cloud / SaaS

Architecture Flow

Step	Layer	Function
1	User	Creates incident ticket
2	ServiceNow UI / Service Portal	Captures ticket information
3	Flow Designer	Triggers automation when incident is submitted/updated
4	Classification Logic	Evaluates category, keywords, priority and conditions
5	Assignment & Update	Sets assignment group and updates incident
6	ServiceNow Incident Table	Stores the classified and assigned ticket
7	IT Support Team	Receives and processes the routed ticket

Table 2 – Application Characteristics

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	No separate open-source framework is required; the solution uses ServiceNow built-in platform tools.	ServiceNow Flow Designer
2	Security Implementations	User authentication, role-based access and access controls protect incident information.	ServiceNow ACL, Roles & Authentication
3	Scalable Architecture	The workflow can handle increasing ticket volumes and can be extended with new categories and groups.	ServiceNow Cloud Platform / Flow Designer
4	Availability	The workflow runs on the ServiceNow cloud platform and is accessible through the ServiceNow application.	ServiceNow Cloud / SaaS
5	Performance	Automated classification and assignment reduce manual processing time and route tickets quickly.	Flow Designer Automation

Technology Summary: ServiceNow | Flow Designer | ServiceNow UI / Service Portal | Incident Table | ServiceNow Cloud | ACL & Roles | Rule-based Classification | Low-code / No-code
