

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	SWUID2026297489
Project Name	Auto Ticket Classification using ServiceNow Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Automatic Ticket Classification	Automatically classify incidents when a ticket is created. Analyze keywords from Short Description and Description fields.
FR-2	Category & Subcategory Assignment	Identify issue types such as Network/Wi-Fi, Hardware, Account/Password, and Software/System Performance. Automatically assign the appropriate category and subcategory.
FR-3	Automatic Ticket Routing	Route the classified incident to the appropriate IT support group. Reduce manual ticket assignment by IT agents.
FR-4	Ticket Creation Confirmation	Automatically notify the student/teacher after incident creation. Send confirmation containing the Incident Number and basic ticket details.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The solution should be simple and easy for IT staff to use and maintain without complex coding.
NFR-2	Security	Incident information should be accessible only to authorized users and follow ServiceNow access controls.
NFR-3	Reliability	The Flow Designer should consistently classify and route tickets according to the defined keyword rules.
NFR-4	Performance	Ticket classification and assignment should happen automatically within a short time after incident creation.
NFR-5	Availability	The classification flow should be available whenever the school IT helpdesk is creating and processing incidents.
NFR-6	Scalability	The solution should handle increasing numbers of student and teacher support requests without requiring major changes.
