

Project Development Phase Model Performance Test

Date	21 February 2025
Team ID	SWUID2026297489
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	ServiceNow automation setup for IT ticket management using a custom table, fields, dependent choices and Flow Designer. Note : When a ticket is created, the flow checks the Short description for keywords. If a keyword matches, Category and Subcategory are filled automatically and a confirmation email is sent to the caller. If nothing matches, Category stays empty for the IT agent to set.	 Flow trigger: Record Created, Category is empty Update Record action: Category and Subcategory
2.	Accuracy	Training Accuracy - Not applicable (rule-based flow, nothing is trained) Validation Accuracy - 100% (2 of 2 test tickets classified correctly)	 INC00511: Network / Wi-Fi INC00512: Hardware / Projector
3.	Confidence Score (Only Yolo Projects)	Class Detected - Not applicable (no YOLO or ML model). The class (Category and Subcategory) is set by a fixed keyword rule in Flow Designer, and a wrong or missing keyword leaves Category empty. Confidence Score - Not applicable. A keyword match is either true or false, so there is no probability score.	 Keyword condition: Short description contains Wi-Fi or Network
