

Project Development Phase Performance Test

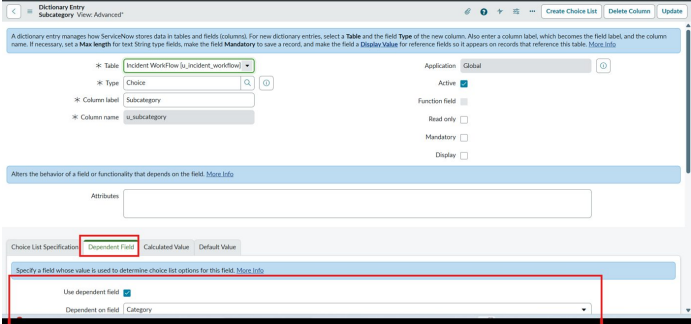

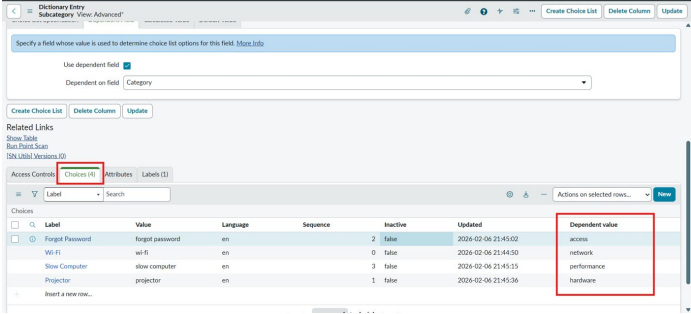

Date	03 October 2026
Team ID	SWUID2026297489
Project Name	Project - Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1	Data Rendered	Ticket records are stored in the custom table Incident Workflow (u_incident_workflow). Two test records were rendered after the flow ran: INC00511 (Network / Wi-Fi) and INC00512 (Hardware / Projector).  INC00511 - auto classified as Network / Wi-Fi  INC00512 - auto classified as Hardware / Projector

S.No.	Parameter	Screenshot / Values
2	Data Preprocessing	Data is standardised at entry: table fields with fixed data types (Reference, Choice, String, Auto Number) and predefined choice lists for Category, Subcategory and State, so no free-text cleaning is needed.  Category choice list in Form Designer  Subcategory choice list in Form Designer
3	Utilization of Filters	Filters are condition-based: the flow trigger runs only when Category is empty, and If / Else If branches filter the Short description with the Contains operator (Wi-Fi, Network, Projector, Forgot password, Slow computer).  Trigger condition: Category is empty  If condition on Short description

S.No.	Parameter	Screenshot / Values
4	Calculation fields Used	No calculated fields were used. Derived values come from automation instead: auto-number (prefix INC) for Number, a dependent-field rule where Subcategory options depend on Category, and flow actions that set Category and Subcategory.  Subcategory dependent on Category  Dependent values on choices
5	Dashboard design	No of Visualizations / Graphs - 0 Not applicable: this is a workflow automation project in ServiceNow and does not include a dashboard.
6	Story Design	No of Visualizations / Graphs - 0 Not applicable: no data story was created.
